

Hibernate

LAB ASSESSMENT 09

NAME : NAGESH V

01.Create an hibernate application to insert record to the table.

- a. use hibernate.cf.xml configuration.
- b. In the entity class use anotation to map the entity.

Program:

First package com.hibernate.employee

CreateEmployee.java

```
package com.hibernate.employee;

import org.hibernate.Session;
import org.hibernate.SessionFactory;
import
com.hibernate.employee.dto.Employee;
import
com.hibernate.employee.utility.HibernateUtil;
```

```
public class CreateEmployee {  
    public static void main(String[] args) {  
        Employee s = new Employee();  
        s.setempName("Preethi");  
        SessionFactory sf =  
            HibernateUtil.connection();  
        Session ses = sf.openSession();  
        ses.beginTransaction();  
        ses.save(s);  
        System.out.println("Insert Record Success");  
        ses.close();  
        sf.close();  
    }  
}
```

second package com.hibernate.employee.dto
entity class Employee

```
package com.hibernate.employee.dto;

import javax.persistence.Column;
import javax.persistence.Entity;
import javax.persistence.GeneratedValue;
import javax.persistence.GenerationType;
import javax.persistence.Id;
import javax.persistence.Table;

@Entity
@Table (name="emp1")
public class Employee {

    @Id
    @Column(name="e_id")
    @GeneratedValue(strategy=GenerationType.I
DENTITY)
    private int id;
```

```
@Column(name="e_name")  
private String empName;  
public int getId() {  
    return id;  
}  
public void setId(int id) {  
    this.id = id;  
}  
public String getempName() {  
    return empName;  
}  
public void setempName(String empName) {  
    this.empName = empName;  
}  
}
```

third package

com.hibernate.employee.utility

```
package com.hibernate.employee.utility;
```

```
import org.hibernate.SessionFactory;
```

```
import org.hibernate.cfg.Configuration;
```

```
public class HibernateUtil {
```

```
private static SessionFactory sessionFactory;
```

```
static
```

```
{
```

```
sessionFactory = new
```

```
Configuration().configure().buildSessionFactory();
```

```
}
```

```
public static SessionFactory connection()
```

```
{
```

```
return sessionFactory;  
  
}  
  
}
```

xml file

hibernate.cfg.xml

```
<?xml version="1.0" encoding="UTF-8"?>  
  
<!DOCTYPE hibernate-configuration  
PUBLIC "-//Hibernate/Hibernate  
Configuration  
DTD//EN"  
"http://www.hibernate.org/dtd/hibernate-  
configuration-3.0.dtd">  
  
<hibernate-configuration>  
  
<session-factory>
```

```
<property  
name="connection.url">jdbc:mysql://localhost  
:3307/emplab</property>
```

```
<property  
name="connection.driver_class">com.mysql.c  
j.jdbc.Driver</property>
```

```
<property  
name="dialect">org.hibernate.dialect.MySQL  
5Dialect</property>
```

```
<property  
name="connection.username">root</property  
>
```

```
<property  
name="connection.password">Chithra@1968  
</property>
```

```
<property  
name="hbm2ddl.auto">update</property>
```

```
<property name="show_sql">true</property>
```

```
<mapping
class="com.hibernate.employee.dto.Employee
"/>

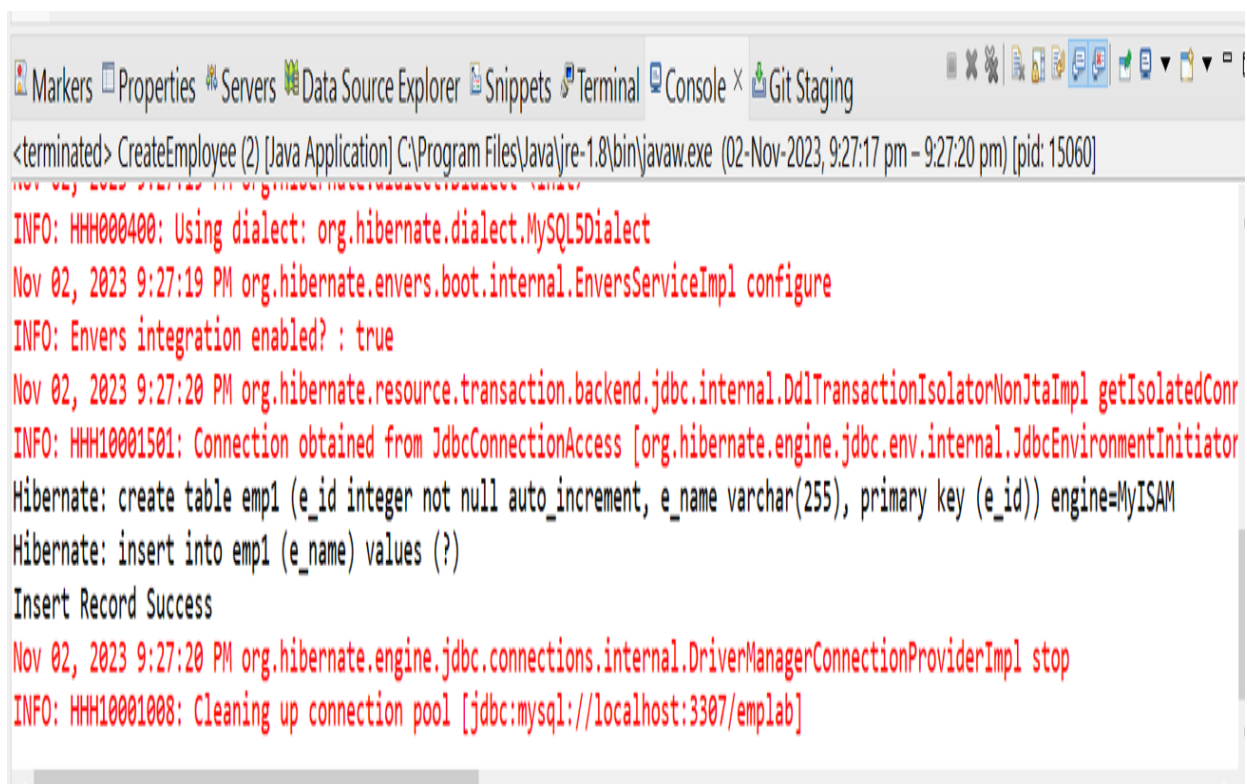

</session-factory>

</hibernate-configuration>
```

```
mysql> select * from emp1;
+-----+-----+
| e_id | e_name |
+-----+-----+
|    1 | Chithra |
|    2 | Preethi |
|    3 | Preksha |
+-----+-----+
3 rows in set (0.00 sec)

mysql>
```

Output:

The screenshot shows an IDE console window with the following tabs: Markers, Properties, Servers, Data Source Explorer, Snippets, Terminal, Console, and Git Staging. The console output is as follows:

```
<terminated> CreateEmployee (2) [Java Application] C:\Program Files\Java\jre-1.8\bin\javaw.exe (02-Nov-2023, 9:27:17 pm - 9:27:20 pm) [pid: 15060]
